When a trinomial, arranged to descending powers of some letter, say x, can be factored into two binomials, it must satisfy the following conditions: (i.) One term of the trinomial is the square of the letter of arrangement, i.e., of the common first term of the binomial factors. (ii.) The coefficient of the first power of the letter of arrangement in the trinomial is the algebraic sum of two numbers whose product is the remaining term of the trinomial. (iii.) These two numbers are the second terms of...
