Brand New Book ***** Print on Demand *****.This historic book may have numerous typos and missing text. Purchasers can download a free scanned copy of the original book (without typos) from the publisher. Not indexed. Not illustrated. 1874 Excerpt: .rapidity of the pulse from general excitation of the nervous system after section of the vagi depends on augmentation of the blood pressure, atropinisation in addition to section of the vagi ought to render the pulse regular and invariable. Experiments conducted in the laboratory at Florence did not, however, confirm this conclusion, and after a long series of researches bearing upon the point, Schiff has not only been able to demonstrate the existence of excitor nerves of the heart, but also to follow their devious tract. These nerves belong to the system of the vagus and have their roots in the accessory nerve. The excitor fibres enter the vagus at the base of the cranium, and in the dog separate from the vagus again before the issue of this nerve from the second ganglion or ganglion of the trunk, which corresponds to the gangliform plexus in man, in order to unite with the cardiac plexus. Audersch long ago was aware that the superior laryngeal nerve gave off a small anastomosing branch to join a ramification of the inferior.laryngeal nerve. It is probable that the cardiac nerves follow the course of this anastomosis to run in the recurrent as far as the thoracic cavity, and there pass off in the delicate branches which this nerve gives off to the cardiac plexus known to Audersch and Neubauer, and which reenter the trunk of the vagus to emerge again almost immediately with the last cardiac branches. Development. 1. W....
